

Module 10 – Version Control (Git)

This document contains exercise-wise sample C# projects that can be version-controlled using Git.

Exercise 1 - HelloWorldApp

Program.cs

```
using System;

class Program
{
    static void Main()
    {
        Console.WriteLine("Hello, Git!");
    }
}
```

Exercise 2 - CalculatorApp

Program.cs

```
using System;

class Program
{
    static void Main()
    {
        int a=10,b=20;
        Console.WriteLine("Addition: " + (a+b));
        Console.WriteLine("Subtraction: " + (a-b));
        Console.WriteLine("Multiplication: " + (a*b));
        Console.WriteLine("Division: " + (a/b));
    }
}
```

Exercise 3 - StudentApp

Create a Student class with Id and Name and display the details.

Exercise 4 - EmployeeApp

Create an Employee class with Id and Name and display the details.

Exercise 5 - BranchDemo

Modify the HelloWorldApp in a feature branch and commit changes.

Exercise 6 - MergeDemo

Merge the feature branch into the main branch.

Exercise 7 - RemoteRepositoryDemo

Push the project to a GitHub remote repository.

Exercise 8 - ForkAndPullRequest

Fork a repository, make changes, and create a Pull Request.
