

1. Git Commands (Version Control)

git init

Initialize a new Git repository: git clone <repository-url>

Clone a repository: git status

Check repository status: git add .

Stage all files: git add <filename>

Stage a specific file: git commit -m "Initial Commit"

Commit changes: git log

View commit history: git branch

List branches: git branch <branch-name>

Create a new branch: git checkout <branch-name>

Switch branch: git checkout -b <branch-name>

Create and switch to a new branch: git merge <branch-name>

Merge a branch: git pull origin main

Pull latest changes: git push origin main

Push changes: git remote -v

View remote repositories: git remote add origin <repository-url>

2. Jenkins Commands (CI/CD)

Start Jenkins: sudo systemctl start jenkins

Stop Jenkins: sudo systemctl stop jenkins

Restart Jenkins: sudo systemctl restart jenkins

Check Jenkins status: sudo systemctl status jenkins

Enable Jenkins on startup : sudo systemctl enable jenkins

View Jenkins logs: sudo journalctl -u jenkins

3. Docker Commands

Check Docker version : `docker --version`

Download an image: `docker pull nginx`

List images: `docker images`

Run a container: `docker run nginx`

Run container in background : `docker run -d nginx`

List running containers : `docker ps`

List all containers : `docker ps -a`

Stop container : `docker stop <container-id>`

Start container : `docker start <container-id>`

Remove container : `docker rm <container-id>`

Remove image: `docker rmi <image-id>`

Build Docker image: `docker build -t myapp .`

View container logs: `docker logs <container-id>`

Execute command inside container: `docker exec -it <container-id> bash`

4. Maven Commands

Compile project: `mvn compile`

Run tests: `mvn test`

Package application: `mvn package`

Clean project: `mvn clean`

Install package: `mvn install`

5. Gradle Commands

Build project: `gradle build`

Run tests: gradle test

Clean project: gradle clean

Run application: gradle run

6. Linux Commands (Used in DevOps)

Current directory: pwd

List files: ls

Create directory: mkdir project

Change directory: cd project

Copy file: cp file1.txt file2.txt

Move file: mv old.txt new.txt

Delete file: rm file.txt

Delete directory: rm -rf folder

View file: cat file.txt

Edit file: vi file.txt

Search text: grep "error" log.txt

View running processes: ps -ef

Kill process: kill -9 <PID>

Check disk usage: df -h

Check memory: free -m

7. CI/CD Pipeline Commands

Clone repository: git clone <repository-url>

Build application: mvn clean package

Build Docker image: docker build -t myapp .

Push Docker image: docker push myapp:latest

Deploy to Kubernetes: `kubectl apply -f deployment.yaml`

Check deployment: `kubectl get deployments`

Check pods: `kubectl get pods`

8. GitHub Actions (Workflow)

Run workflow manually: `gh workflow run <workflow-name>`

List workflows: `gh workflow list`

View workflow runs: `gh run list`

View run details: `gh run view`
